

What is Google Keyboard ?

Google Keyboard (GBoard) is the most popular virtual keyboard application developed by Google targeting mobile devices. The main features are:

- Clipboard management
- Smart suggestions
- Multilingual support
- Personal Dictionary
- Expressions suggestions

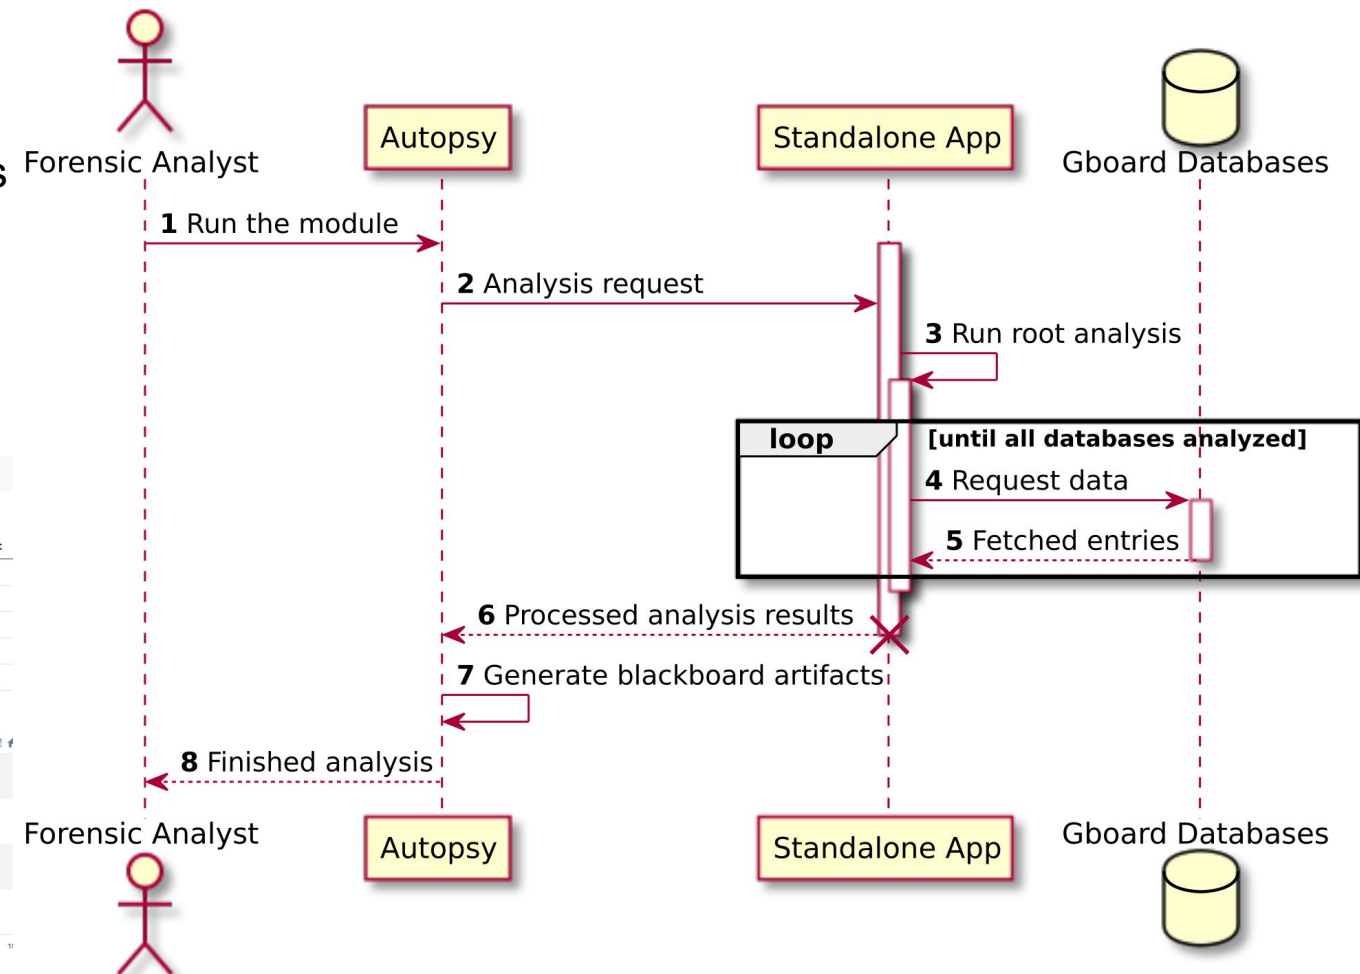

GBoard Forensic Analyzer with Autopsy

GBoard4A

Main goals of this project:

- Analyze and explore GBoard components and functionalities on an Android system
- Identify the artifacts created by using GBoard on an Android system
- Development and integration of various technologies to facilitate investigation of forensic cases

Application structure:

Ingest Data Source Module:
Autopsy module that integrates the extracted content gathered from the standalone application.

General Report Module:
Autopsy module that easily generates a HTML5 compatible and portable report file
